About this course

Dermaplaning and chemical peels are two of the most requested skin treatments, and they work even better together. Dermaplaning removes dead skin and fine vellus hair for an instantly smoother finish, and a peel applied afterwards penetrates more evenly for brighter, clearer results.

This course is for therapists wanting to add both to their menu. You'll refresh the layers of the skin and learn how each treatment affects it. For dermaplaning, you'll cover blade types, choosing the right clients, and a safe, controlled technique.

For chemical peels, you'll learn the main peel types and their active ingredients, how to match a peel to a client's skin and concerns, safe application and removal, and when to combine the two treatments.

After a demonstration by one of our educators, you'll practise both treatments on live models, tailoring each one to the client in front of you. Contraindications, precautionary skin conditions, aftercare and hygiene are covered throughout.

Prior skin knowledge is required. We recommend completing our Foundations of Skin & Facials course first, or you can enrol with an existing skin or beauty therapy qualification. Proof of prior skills required.
